

## Health Profession Opportunity Grants Roundtable Meeting

---

### ***Exercise: Conduct a PAGES Data Analysis***

Complete the table—fill in the spaces with the following:

- A. What PAGES data set of the three that you have on hand would you use to answer this question?
- B. What kind of Chart or Table would be best for displaying this information? You can choose one or more of Data Table, Bar/Column Chart, Pie Chart, or Line Chart.
- C. Who would your desired audience be? What kind of message would this data help you support?

Question	A. Data Set	B. Chart or Table Type	C. Desired Audience
1. Breakdown of training completion statuses – by specific Occupational Code, such as nursing assistant			
2. Average hours worked and wage of participants who are employed in healthcare			
3. Average number of trainings enrolled and completed, and employments, by TANF status at intake, for participants who showed employment progress			

Next, fill out the following empty shell, answering Question 1 from above: “breakdown of training completion statuses – by occupational code.” Fill in the blank before “Training Completion Status” with an occupational code in your extract – for example “31-1014 Nursing Assistants.” Use the PAGES data to fill out the numbers and percentages in the blank table. It’s best to re-create the shell in Excel, and populate the numbers there. When you are done, try to make a pie chart displaying the data.

_____ Training Completion Status	Number	Percent
Total Trainings		
Dropped Out		
Did Not Pass		
Certificate of Completion		
Associate's Degree		
Bachelor's Degree or above
