

Resources from

Adolescent and Young Adult Health at AMCHP

AMCHP's Child and Adolescent Health team works on projects related to adolescent and young adult health, child health, and children and youth with special health care needs (CYSHCN).

We support and partner with state Title V MCH programs, local and community partners, and national and federal organizations to promote optimal health and wellbeing for children, CYSHCN, adolescents and young adults by:

- Providing a continuum of technical assistance (from one-on-one connection with AMCHP staff to cross-state peer sharing to intensive action learning and quality improvement collaboratives)
- Elevating critical issues and topics at the national level
- Fostering collaboration internally and externally
- Supporting a holistic approach to adapting to changing environments for child and adolescent health
- Promoting novel solutions to emerging issues
- Addressing gaps in health equity through intentional & inclusive consumer engagement
